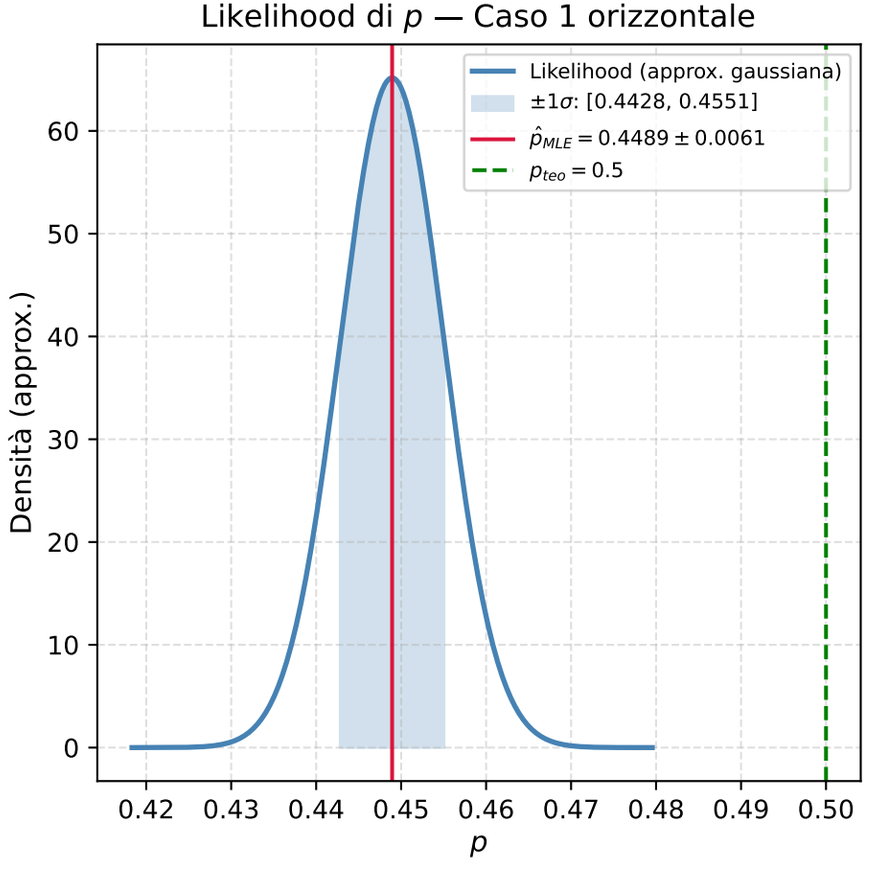
Caso 1 orizzontale — confronto distribuzioni
Binomiale($p = 0.5000$, $n = 33$)
Dati reali (n=200.0)
Simulazione (10^6 palline)
$\chi^2 = 129.72$
ndof $= 9$
p-value $= 0.00000$
Probabilità
Bin (posizione finale)



Likelihood di p — Caso 1 orizzontale
Likelihood (approx. gaussiana)
$\pm 1\sigma$: [0.4428, 0.4551]
$\hat{p}_{MLE} = 0.4489 \pm 0.0061$
$p_{teo} = 0.5$
Densità (approx.)
p
