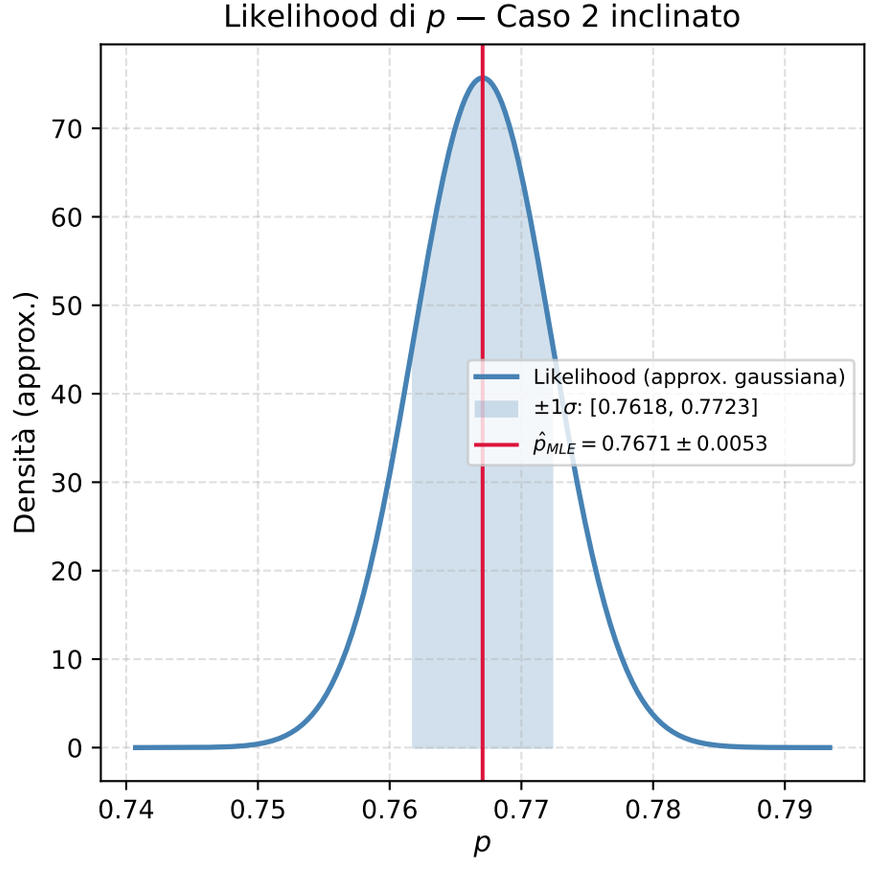
Caso 2 inclinato — confronto distribuzioni
Binomiale($p = 0.7671$, $n = 33$)
Dati reali (n=195.0)
Simulazione (10^6 palline)
$\chi^2 = 103.78$
ndof = 7
p-value = 0.00000
Probabilità
Bin (posizione finale)



Likelihood di p — Caso 2 inclinato
Likelihood (approx. gaussiana)
±1σ: [0.7618, 0.7723]
$\hat{p}_{MLE} = 0.7671 \pm 0.0053$
Densità (approx.)
